

Integrated, Automated and Compliant SAP License Management

WITH SECURITY WEAVER'S™ LICENSE MANAGEMENT MODULE - (LM) MODULE™

Security Weaver's new license management module (LM Module) is the only license management tool available which offers compliant license management automation integrated with automated user provisioning.

Security Weaver's license management module delivers role-based license management tools that will allow your organization to optimize SAP and other complex licenses. With clear visibility into the cost of assigning specific roles, management will be able to make informed cost decisions on the fly as user access is assigned using Security Weaver's Secure Provisioning (SP)™ application. Integration with Security Weaver's SOD tools Separations Enforcer (SE)™ and Secure Enterprise (EN)™ will ensure that roles are both cost-effective and compliant.

(LM) Module Features:

Integrated Control Over Expensive Roles:

- » **Role Creation:** LM is integrated into the role creation process providing for cost-effective role design by providing t-code level visibility to the cost of each role.
- » **User Provisioning:** LM is integrated into the user provisioning process to provide management with transparency into the cost of each new user or change to existing user access.
- » **License Type Classification:** Automated based on role assignment through the user provisioning process.

Leverage standard SAP Transactions:

- » LM will integrate with standard SAP transactions such as LAW and USMM to ensure efficiency and data integrity.
- » License_attributes is used to map roles to license type.

Contract Master Data:

Provides the ability to manage multiple contract attributes and associated external and internal costs

Support for Negotiations:

Integrated "What If" Analysis for predictive modeling through contract negotiations utilizing SAP versions.

Minimal Infrastructure Expense:

LM is integrated with Security Weaver's Access Controls Suite so there will not be any additional hardware, operating system or DBMS licenses to purchase and maintain.

Self Contained Environment:

No data extraction / interface requirement to 3rd party tool for SAP License Management
